Profile

I love to take on new challenges and am constantly working towards achieving my goals. Over the course of my time at University, I took my real estate licence and co-founded/ managed the Campus Conservative Club. My experience has taught me how to work with a team as well as work alone.

Experience

Leasing Agent - Mainstreet Equity Corp. - Calgary, AB - Summer 2010/ 2011/ 2012

For three consecutive summers I worked as a leasing agent and marketing assistant at Mainstreet Equity. These positions created opportunities to not only provide great service for tenants but to also work and coordinate closely with my coworkers.

Education

University of Victoria - BA. Economics with Business minor - 2010-2014

Throughout my time at University of Victoria my studies focused primarily on banking systems and market functionality, however it also provided me a solid foundation of business operations.

Lighthouse Labs - July-Sept 2014

Lighthouse has taught me more than just a variety of different programming languages. It has taught me best practices, confidence in my problem solving abilities and how to quickly pick up new technologies.

Projects

Darkroom: A web application built by myself and two of my colleagues using Sinatra, Ruby, Javascript and GitHub coordination. Darkroom allows users to post obscure graphic designs or images they require accompanied by their price point. Designers can then search through listed jobs and fulfil users needs in exchange for payment which is handled by the Stripe API.

NoteShare: Built primarily with Ruby on Rails, NoteShare is a web application that crowd sources and recycles old university tests, assignments and notes.

GoHelp: Sinatra and Ruby application that uses a kickstarter like system to help volunteers and project managers connect. Built by a team of three using Github to coordinate and collaborate our work. Front end designed using the Bootstrap framework.

Skills

CSS3 - HTML - Ruby on Rails - Javascript - jQuery - GitHub - TDD - Rspec
Bootstrap - Sinatra - SQL
